

Eagle Eye™ & Flash Flag™

WHERE TO USE

Open, exposed areas where bird populations cannot be controlled with mechanical means; parking lots, roof-tops, warehouse doors, building facades, agricultural settings, public areas, etc.

TARGET BIRD

Pigeons and gulls

BIRD PRESSURE

Light - Medium

MATERIAL

Durable ABS plastic, aluminum and galvanized steel

INSTALLATION

Installation is simple, the important step is determining the best placement for the devices.

Solar-powered Eagle Eyes prevent birds from landing on the skylights of this shopping mall.

A mounted Eagle Eye deters birds from this beachside resort.

Multiple Eagle Eyes placed around this apartment complex, keep birds out of the area.

How it Works

The Eagle Eye is an optical bird scarer that harmlessly deters birds from unwanted areas by making use of light beams reflected from direct sunlight. The reflective pyramid rotates sending the beams around in a menacing pattern. The light spectrum reflected back by the Eagle Eye and Flash Flag disorients birds in flight by limiting their vision significantly. This causes the bird to deviate in flight and fly to another destination.

Powering the Unit

Eagle Eyes are powered by wind or a 12 v. motor. The motorized version can be powered directly from a Solar Panel making it adaptable for different locations. A wide variety of brackets and lights are available to mount to any surface.

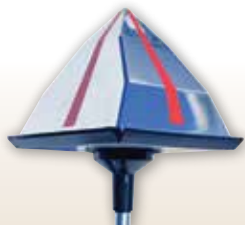

Coverage

The Eagle Eyes and Flash Flags reflect light and are effective in a line-of-sight area. In agricultural settings (without many obstacles), the Eagle Eyes can be 150-300 feet apart, and the Flash Flags about 50 feet apart. On buildings with different elevations and shade from other buildings they may need to be closer together. It is recommended that at least two units are used to help protect the shadow areas behind (opposite the direction of the sun).

The Eagle Eye System

The system has evolved from the original "motorized" Eagle Eyes to a family that now includes the "wind-powered" Eagle Eyes and the Flash Flags that flash based on air movement. This system allows for more complete coverage at lower cost. Our technical team can help position the family of products directly on satellite photos.

Eagle Eye - 12v. Motorized

Powered by a long-lasting electric motor it can run from a 110v. outlet or a solar panel. The kit includes one Eagle Eye, one 110vac to 12vdc power supply, 25 ft. low voltage wire, and all the tubing and connectors needed for most applications.

Motorized Eagle Eye Only	EE-P010	650713
Motorized Eagle Eye Kit	EE-01	650711
Red Motor Kit for Gulls	EE-03	784376
Motorized Red for Gulls	EE-P009	

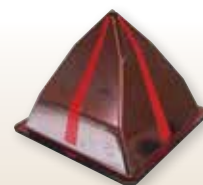

Eagle Eye - Wind Powered

The name says it all, it's powered by the wind. Wind powered units should be used in tandem with motorized Eagle Eyes for non-windy days. Buy the unit alone, or with a kit that contains all the tubing and connectors needed for most applications.

Wind Powered Eagle Eye Only	EE-17	
Wind Powered Eagle Eye Kit	EE-04	
Red Wind Powered Kit	EE-06	
Red Eagle Eye for Gulls	EE-18	

See kit contents below.

Red vs. Silver Eagle Eye

Silver and Red - This is primarily for pigeons, but is effective on a wide assortment of birds including gulls, and other larger birds

Red - This is used when gulls are the primary bird to be repelled, and it will not repel other species as well.

Eagle Eye Mounting Kit

The kits listed above include the following items: one mounting bracket, one 10 inch tube, one 16 inch tube, four interconnection tubes, 25 ft. wire, power cord, screws and connectors. Wind powered kits do not contain the electrical components.

Low Voltage Lead-Out Wire

Low-voltage exterior wire rated for direct burial or above ground use. 25 ft. is included with Eagle Eye.

Lead-Out Wire (25 ft.)	EE-41	
Lead-Out Wire (50 ft.)	EE-42	
Lead-Out Wire (100 ft.)	EE-43	

Mounting Brackets

The standard bracket mounts Eagle Eye to a flat surface. The angle bracket mounts it to a roof peak or corner.

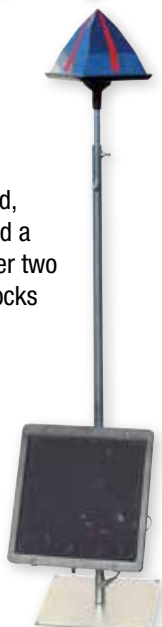

Flat Bracket	EE-P080	660978
Angle Bracket for Bldg. Corners	EE-P085	

Roof Mount and Solar Panel

Make your Eagle Eyes portable with our galvanized, adjustable (4-8 ft.) Roof Stand and solar panel. Add a battery for 24 hour operation. One panel can power two Eagle Eyes. Weigh the base down with cement blocks for security.

Solar Panel Kit	EE-07	782679
<i>Includes solar panel (7.5w), mounting bracket and 12v. battery</i>		
Solar Panel (7.5w)	EE-P073	
Solar Mounting Bracket	EE-22	
12v. Battery	EE-P070	
Adjustable Roof Stand 4'5" - 8'	HV-P04	731748
Protective Pad (under stand)	HV-PAD12	732729

Shield with Bracket

This shield attaches to the Eagle Eye support tube. The shield can then be oriented to keep the flashing away from the building interior.

Shield with Bracket	EE-10
---------------------	-------

Parapet Support Tube

Used to extend the placement of the Eagle Eye from its base. Use these when the standard kit does not accommodate your installation.

Parapet Support Tube	EE-75
----------------------	-------

Flash Flag

The Flash Flag is a reflective device proven to be very effective in reducing bird infestation. The Eagle Eye FlashFlag's purpose is to complement the efficacy of the Eagle Eye reflector, as well as other bird control products.

- Simple, effective bird control
- Easy to install
- Eco-friendly
- Wind-driven - no electricity needed
