Two rows of Bird-Shock with Quick Connect corners protect the top of this column from pest birds.

Bird-Shock takes a gentle bend to completely protect this parapet cap at a California school.

Beige Bird-Shock blends perfectly with this light colored ledge.

Patented

Bird-Shock Flex-Track is so good, and unique, it has been granted several patents by the US Patent and Trademark Office.

Flexible and Adaptable

This low-profile electrified track conforms to any architectural configuration. Flex-Track curves up and down, and side to side; and the stainless steel braid gently follows the UV-stabilized PVC base without wrinkling.

Almost Invisible

At only one-quarter of an inch high, and available in five different colors, Flex-Track is hard to see close-up, and invisible from a distance. It is not seen looking up from below.

Long-Lasting

Made from UV-stabilized PVC, and Stainless Steel, Flex-Track will be in service far longer than its five-year warranty.

Humane

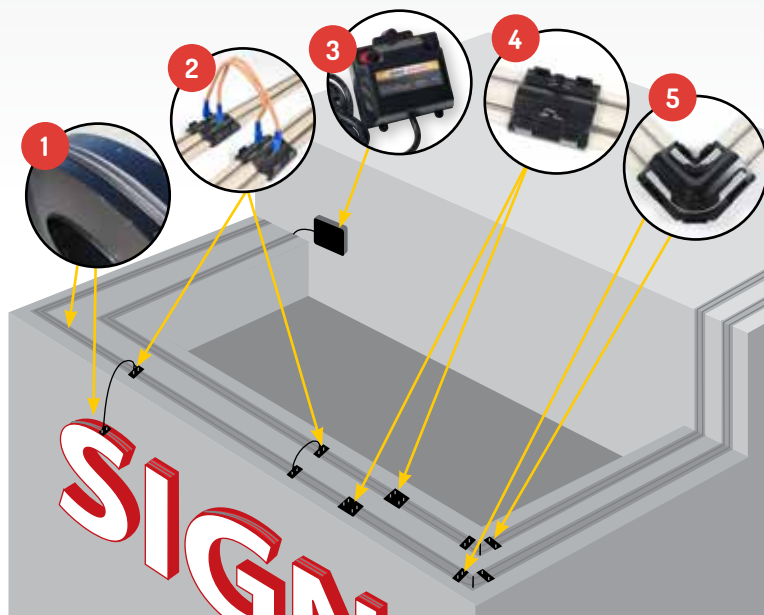

The intermittent shock is memorable, but does not hurt the birds; it simply teaches them to stay away, long-term.

Bird-Shock: Active Bird Control

Bird-Shock Flex-Track has changed the face of the bird control industry. One product is able to protect a wide variety of surfaces from all bird species, while at the same time being virtually invisible, and incredibly durable.

- 1) Flex-Track protects straight ledges, and curves easily to protect sign letters.
- 2) Jumpers snap quickly to the track, making it easy to power multiple tracks.
- 3) A charger unit mounts to the building and sends intermittent power down the two conductors.
- 4) Quick connectors are used every 50 feet, or wherever else connections are needed.
- 5) Corner Quick Connectors make 90 degree angles a snap.

Important Note: Electrified systems are active systems. They require regular maintenance.

Five colors to blend with the building.

Bird-Shock Flex-Track

The tracks come in 50-foot lengths. Each roll includes 11 straight connections and nine corner connections (crimp style, not Quick Connectors), which will accommodate normal applications.

Recommended Spacing

One row of Flex-Track can protect the same width ledge as multiple rows of other products. Labor and material are therefore much less. Often just one row on the outer edge is enough.

Small birds and/or heavy pressure

Large birds and/or light-medium pressure

Double-sided ledges

Anti-water damming pads stuck every 12 inches will allow water to flow under the track. 10 pads are included with each roll of track.

Quick Connectors

Use two Straight Connectors to jump power from track to track.

Quick Straight Connectors

Fast and easy to install, attractive and ultra durable. Saves labor time and provides for a long-lasting installation. 20-pack.

Quick Straight Connectors (20) BS-Q06

Quick Corner Connectors

This connector is revolutionary. It is low profile and features copper conductors over the entire surface. Straight cut the track, lay it inside the connector and snap the durable top down for an attractive connection.

Quick Corner Connectors (10) BS-Q07

"T" Connector

Many jobs require time consuming T's. Now those can be done just as quickly as straight and corner connections. The part can also hinge up or down for angled applications, like roof peaks..
