

OvoControl® P

WHERE TO USE

Large sites such as Refineries, Power Plants, Paper Mills, Airports, Malls, Food Processing Plants, Parks, Campuses
Pigeons, Grackles, Starlings, Blackbirds, Cowbirds and Myna birds

TARGET BIRD

BIRD PRESSURE

All pressure levels

MATERIALS

General use pesticide, automated feeder

INSTALLATION

Install automatic feeder on flat rooftops

INSTALLATION LEVEL

Easy

VIDEO

Even at the largest plants, OvoControl is an ideal tool to manage the population of birds.

Feeders were placed on rooftops, targeting the larger flock and remaining unseen from below.

OvoControl feeders can hold up to 120 lbs of bait and broadcast kibbles 30 feet from the center.

Product Information

OvoControl P is a ready-to-use bait that controls the reproduction of treated birds, causing the population to decline. This effective and humane technology is especially useful for managing pigeon flocks in larger areas without having to resort to poisons and their associated risks.

Registered by EPA (Reg. #80224-1)

Approved in all states as a general use pesticide, OvoControl P is ideal for large areas where some pigeons can be tolerated but where a substantially reduced population is desired. OvoControl P is non-hazardous and supported by the Humane Society of the United States, ASPCA, Audubon and the Peregrine Fund.

Recommended Use

Baiting can begin at any time — flat rooftops are ideal. OvoControl P has a wide margin of safety and efficacy. No special license is required to purchase or apply the product.

Efficacy

Pigeons breed rapidly – just five mating pairs can produce up to 400 pigeons in only two years. Fortunately, the life-span of urban pigeons is short, limited to just 2-3 years. When applied according to label directions, OvoControl P interferes with egg hatchability. Since no new birds are hatching, the population of birds declines naturally and continuously. Field studies show a reduction of approximately 50% annually. Recently collected data at a monitored site in San Diego reflected an 88% decline over 28 months.

Dosage

OvoControl P is supplied in 30 lb. bags. Apply once daily with an automatic feeder at a rate of 1 lb. per 80 pigeons.

Non-targets

OvoControl P has a contraceptive effect only in birds and has no secondary effects in birds of prey. OvoControl P is considered a pesticide and care should be taken to avoid administration to non-target birds and other animals.

OvoControl® P

At a South Carolina chemical plant, a combination of OvoControl & live trapping reduced the pigeon burden to near zero over just 6 months.

From 200 pigeons to just 5 over 24 months. This college remains essentially pigeon-free.

OvoControl ready-to-use kibbles are sized just right for pigeons.

Technicians service an automatic feeder at a paper mill in Canada.

A Houston medical center used OvoControl as well as physical deterrents to rid the facility of a chronic pigeon problem.

Acting as birth control, OvoControl eliminates the ability for pigeons to reproduce and allows the population to decline.

Feeder

Tripod Feeder includes battery and solar panel.

Holds 120 lbs. of OvoControl (four bags).

OvoControl application is made easy with an automatic feeder, rechargeable battery and solar panel.

Feeder Mat

Heavy Duty 3/8" rubber mat protects sensitive roofs and secures the feeder to a flat surface. Features pre-punched bolt holes that match up to the feeder's feet for a bolted connection. Secure with bricks or other appropriate weights.
