

# EAGLE EYE®

A Mirror and the Sun

## WHAT IS EAGLE EYE?

Eagle Eye is a system of devices that reflect filtered sunlight at particular wavelengths that have been shown to trigger a fear response in certain species of birds.

While most systems concentrate on preventing birds from landing on a particular surface, Eagle Eye works to keep birds from entering a particular airspace. It's a first-line of defense against new pest bird infestations and an effective supplement to traditional, physical deterrence or exclusion systems.

The flashes from Eagle Eye are generally harmless while causing birds to divert their flight paths and seek residence elsewhere.

The Eagle Eye system is a sustainable, scientifically-based, open-area bird deterrent for light-to-medium pressure scenarios. It is ideal for agricultural and industrial applications where physical deterrence or exclusion may not be practical.

## THE EAGLE EYE GUARANTEE

Eagle Eye isn't just one device, it's a system of complementary devices--Eagle Eye, Pro-Peller, and Bird Breezer--that work in tandem to provide complete airspace coverage. Placement of the system is just as important to success as knowing which units to purchase. If you are considering Eagle Eye as part of your bird control strategy, contact us first for a free, no-obligation consultation. We'll make sure that Eagle Eye is the right answer and provide a customized system layout that you can use as part of your site's overall bird control strategy.

Eagle Eye's experienced in-house team of technicians use satellite photography to design a solution unique to each scenario while accounting for factors like the building's architecture, orientation, the surrounding environment, and even the movement of the sun across the sky! When properly specified and installed, Eagle Eye will guarantee a reduction in bird presence of 60-80% within three months in most cases. While the Eagle Eye system does not typically affect nesting birds, Bird Barrier's physical devices complete the system to offer a robust, long-term solution.

Take the guesswork out of Eagle Eye. Contact Bird Barrier for your placement layout and start offering your customers **GUARANTEED** results!

### ON-SITE LAYOUT

Bird Barrier can help you design a placement plan for your Eagle Eye system. Before considering Eagle Eye, please contact us for consultation to make sure the system is right for your application.

### WHERE TO USE

- Rooftops
- Open Areas
- Parking Lots
- Warehouse Doors
- AG Settings
- Building Facades
- Public Areas

### TARGET BIRDS

- Pigeons, starlings & gulls.

### BIRD PRESSURE

- Light to medium

### MATERIAL

- Durable ABS plastic, aluminum, and galvanized steel.

### INSTALLATION

- Models are 110V, solar-powered and wind-powered.
- Extension poles, bases & maintenance products available.
- For guaranteed bird elimination, include our support products below.

### INSTALLATION LEVEL

- Intermediate- Must be performed in accordance with recommendations from Bird Barrier.

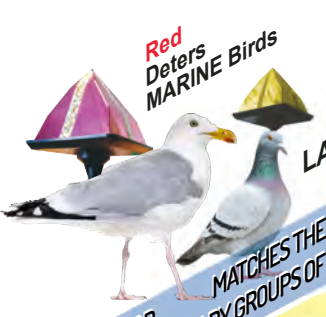

Red Deters MARINE Birds

Silver/Gold Deters LAND Birds

MATCHES THE OCULAR MORPHOLOGY OF THE TWO PRIMARY GROUPS OF BIRDS.

EACH COLOR

### WIND-OPERATED

This kit includes a straight tube, metal mounting bracket and hardware kit.

Eagle Eye 110V Red Kit EE-1PR

Eagle Eye 110V Silver/Gold Kit EE-1PG

### 110V OPERATED

This kit includes a new weatherproof electrical housing, lead wire, straight tube, metal mounting bracket and hardware kit.

Eagle Eye 110V Red Kit EE-1PR

Eagle Eye 110V Silver/Gold Kit EE-1PG

### SOLAR POWER OPERATED

This kit includes a more powerful solar panel, lead wire, straight tube, metal mounting bracket and hardware kit.

Eagle Eye Red Solar Kit EE-1SR

Eagle Eye Silver/Gold Solar Kit EE-1SG

DEBB SCARFF

# EAGLE EYE®

Frighten Away from Afar

### MOUNTING POLE

The pole mounts into the flat bracket to provide better range of coverage for the Eagle Eye. The bracket should then be mounted to a substantial surface such as a paver brick or the building itself to prevent falling over. If using a paver brick, the solar panel can mount there as well to create a self-contained, portable unit (see photo).

Mounting Pole

EE-XP6

### CLEANER

The Eagle Eye needs to be cleaned periodically to maintain its reflectivity. Use these special formulas designed to maximize the unit's reflective properties while protecting the surface from oxidation and degradation. Cleaning formulas are specific to the color of the Eagle Eye unit.

### SHINE

EE-SHN

### ANGLED MOUNT

For mounting to peaks or corners. Not included in kits.

### ROOF PEAK

EE-SHN

### SHIELD

Block reflections from hitting specific points at any distance.

### REFLECT SHIELD

EE-SLD

# BIRD BREEZER

A highly visible rotating device that deters approaching birds from landing nearby. The Bird Breezer is most effective when installed in direct sunlight and requires only a slight breeze to rotate.

Ideal for rooftops, chimneys, parapets, pergolas, louvers as well as reducing bird related crop damage in the agriculture. The Bird Breezer unit and mounting bracket are made out of ABS plastic. The four metale-

ABS cups rotate on a durable double-bearing assembly to ensure optimal sensitivity, balance and longevity. Glue or screw to the surface.

Bird Breezer Silver Gold EE-BBS  
Silver/Gold 110V Kit EE-BBR

# PRO-PELLER

The Pro-Peller is a durable, cost-effective unit used to complement the Eagle Eye by extending the effective range and flashing pattern. The unit rotates by means of its double-bearing system and the wings have been designed to rotate in the slightest of breezes.
